Standardized Reporting System for Private Water Service Operators, France

Bernard Guirkinger, Chairman of the Professional Association of Private Water and Sanitation Operators (SPDE)
Management of Water and Sewerage Services in France (1/2)

Key Figures

• 61 million people
• 15,000 water supply services
• 14,500 sewerage services

Organization of Services

• Control and organization of water services: local authorities, (objectives, priorities, tariffs, management)
• Operator: public or private, responsible for managing the service
• Outsourcing: usually partial and in the form of concession or affermage contracts
• Lively competition: 500 to 700 calls for tender every year
Management of Water and Sewerage Services in France (2/2)

Market share for water and wastewater services

- **In terms of population supplied (water services)**
  - Private operators: 74%
  - Public operators: 26%

- **In terms of revenue**
  - Local authorities and public operators: 45%
  - Private operators: 37%
  - State and Water Agencies: 18%
Main Objectives

• To provide an effective tool for the operator for reporting to the local authority (management chart)

• To create a tool to inform and foster dialogue with stakeholders

  Consumers, public authorities

• To serve as a performance benchmark for the continuous improvement of the service

  Providing information about the service, other than price

  Providing a basis for the assessment of the operational and economic performance of the service
Contributory Initiatives

Several professional associations are working on the same issue:

- FNCCR (French Association of local authorities and public operators)
- AFNOR (French standardization organization)
- IGD (French Institute of Delegated Management)
- SPDE (Association of French Private Water and Sanitation Operators)
The SPDE Initiative

Since 2002

- A frame of reference with 23 performance indicators
  
  (7 for water, 7 for sewerage, 9 for both)

- Published in operators’ annual reports

- Applies to the 1,500 privately managed water and sewerage contracts for communities of over 10,000 people

  i.e. 30 million users (50% of the French population)

- The most significant initiative to date in respect of a local public service
Performance Indicator Selection Criteria

- About the economic, social and environmental aspects of the service
- Limited in number and easy to understand
- Addressing means (e.g. crisis management) as well as performances
- Enduring and reliable
SPDE Performance Indicators

- **Water Supply**: 7 indicators
  (e.g. compliance with drinking quality standards, non revenue water)

- **Sewerage**: 7 indicators
  (e.g. compliance with treatment standards, sludge disposal policy)

- **Customer Relations**: 2 indicators
  (e.g. complaints, customer satisfaction surveys)

- **Social Component**: 3 indicators
  (e.g. « acces to water » solidarity policies, local consultative committees)

- **Management Systems**: 3 indicators
  (e.g. ISO 9001, ISO 14 000)

- **Tariff of Water**: 1 indicator

Indicators common to both services
Progress to Date

- Well received by users and partners
- The indicator values should be regarded as indicative of general trends rather than in absolute terms
- It will take time for the system to bed in
- Significant costs involved in collecting data and need to adapt information systems in many cases
- A source of feedback which could contribute to international efforts in this area (International Water Association)
Conclusion

➢ A system that still needs perfecting:
  • Need to work to harmonize definitions, measuring systems and interpretations
  • Need to improve communication tools vis-à-vis users

➢ Statutory instrument in preparation:
  • Improvement of France’s contribution to international reporting processes on water quality and the environment
  • Continued improvement of public confidence in the quality of their water and sewerage services
